PRODUCT ANNOUNCEMENT: INTRUSION

Site Manager End User Software

For Solution 6000 Control Panels

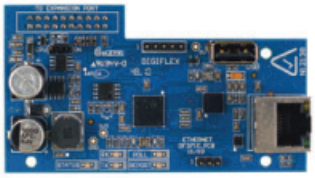
www.boschsecurity.com.au

BOSCH
Invented for life

- Intuitive software interface designed to give the end-user control over access functions of their Solution 6000 intrusion system.
- Interactive control over doors, outputs, virtual keypad and live log viewing.
- IP network control over multiple Solution 6000 panels and components.
- Option desktop card / token reader available for programming.

Makes End-User System Administration Easy

Site Manager is a new software platform for the Bosch Solution 6000 intrusion panels that gives end-users the ability to easily administrate the day-to-day operations of their system. The software allows a security manager to control multiple panels in different locations by way of conventional IP networks*, giving them access to user lists, access control, timezones, and system and user activity logs.



* Site Manager requires a CM751B Plug On Ethernet IP Module for operation

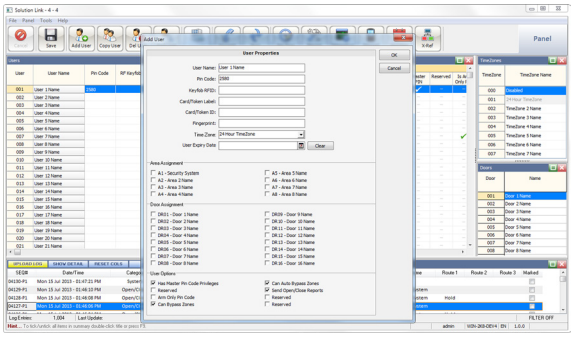
Remote Control Of Panel Features & Functions

The Interactive mode of Site Manager allows the end-user to remotely control features of the panel such as outputs, doors, and includes a live log of access and other events. When used with the optional CM436B Desktop Prox Card/Token Reader, Site Manager allows the end-user to learn in access cards and token at the administration PC, without having to go out to a field device.



User entry

CM436B Desktop Prox Card/Token Reader.

With the software suite being topped off by a fully integrated reporting system, Site Manager places a new level of control, administration, and understanding in the hands of the end-user.
